EXHIBIT "A"

1. That this authorization, unless specifically extended, shall terminate in one year. Extension of time following the one-year period may be possible upon proper request and reevaluation of conditions by the reviewing agencies.
2. The dredge tailings shall be spoiled to the same grade and slope as the existing channel grade so that no holes or high spots remain.
3. That no material shall be stock piled within the river flowage area during flood season November 1 to April 15.
4. That no dredging shall be made within 400 feet of Reclamation District No. 777's low water bank toe and 800 feet from the upstream side of the 10th Street Bridge in Yuba City.
5. The applicant, prior to commencement of the proposed dredging operation, shall submit detailed dredging plans for approval by the State Reclamation Board. Plans shall show the limits of the areas to be dredged, and cross-sections taken at about 300-foot intervals, showing the existing channel bottom to at least the low water elevation.
6. That the existing riverbanks shall not be disturbed by the dredging operations.
7. All side slopes of the dredged areas shall not be made steeper than 1 on 3 slope.
8. No dredging shall be done within 25 feet of the low waterline along either the right or left bank of the Feather River.
9. Any trees or brush cleared shall be completely burned or otherwise removed from the overflow area of the Feather River prior to October 15, 1969. No downed trees or cut brush shall be allowed to remain in the floodway during October 15 to April 15 of each year.

14. The permits are to be issued on an annual basis and are subject to revocation if it is demonstrated that damage is occurring to fish and wildlife values.
15. That the tailings from the proposed dredging shall be spread uniformly across the low water channel of the Feather River and not allowed to pile up into high spots or dikes which might cause a deflection of flow against the riverbanks.
