AMENDMENT OF LEASE

APPLICANT:

California Department of Transportation

AREA, LAND TYPE, AND LOCATION:

Submerged lands in the Sacramento River, near Butte City, Glenn County.

AUTHORIZED USE:

Continued use and maintenance of an existing 101.5 Use Permit for the Butte City Bridge (Bridge No. 11-0017).

LEASE TERM:

Continuous use plus 1 year, beginning October 30, 1959.

CONSIDERATION:

The public use and benefit; with the State reserving the right at any time to set a monetary rent if the Commission finds such action to be in the State's best interest.

PROPOSED AMENDMENT:

Amend lease to allow construction of a series of four rock groins and placement of rock slope protection. All other terms and conditions of the lease shall remain in effect without amendment.

OTHER PERTINENT INFORMATION:

- 1. Applicant has a right to use the uplands adjoining the lease premises.
- 2. The California Department of Transportation (Caltrans) is proposing an erosion control project along the westerly bank of the Sacramento River, to control erosion that is threatening the stability of the shallow bents at the Butte City Bridge on State Route 162 in Glenn County. The River is rapidly eroding the riverbank upstream and downstream from the Bridge.

CALENDAR ITEM NO. C02 (CONT'D)

The current alignment of the River through the Bridge span results in a significant potential for continual scour and erosion along the west bank line, which will render the bridge bents unstable, thus unsafe for the traveling public. To maintain integrity of the Bridge, four rock groins will be placed upstream of the Bridge along the westerly bank. The groins will be located approximately 150-200 feet apart from each other, and will vary from 20 to 65 feet in length. The main function of the rock groins is to deflect flowing water and reduce flow velocities near the riverbank, encourage sediment deposition, and establish a more desirable channel alignment, thus preventing erosion along the riverbank. In addition, one-half ton of rock slope protection will also be placed along the westerly riverbank downstream of the Bridge. Rock slope protection placement is intended to maintain stability of the bridge by controlling erosion.

- 3. A Mitigated Negative Declaration was prepared and adopted for this project by Caltrans. The California State Lands Commission's staff has reviewed such document.
- 4. A Mitigation Monitoring Program was adopted by Caltrans.
